

Mini project

Mini project about Online Library system where have add different type of user like admin and librarian. Also, this system can add a new user to the system and can to manage user information, CRUD functions. User can add a new book to the database and manage it. The main page will demonstrate the list of books and there is information. Also, the will show the comments of other users.

Functionality:

- ✚ CRUD for book. We can change information about book info. User authorized and can add a new book to the database. Also, user can write comments to the book. These comments will show in the main page of the website.
- ✚ CRUD for user information. Admin login to the website with sign in functionality, and add a new category(genre) of books and can add a new book to the database.
